LEADER-DimASQP Pipeline

Draft-then-refine prediction with set-based training and dev-only system selection

Architecture

Input sentence → Tokenizer + encoder → Contextual token states → Draft heads spans / pairs V-A → Rethink + refined heads

refined predictions

Training Objective

Candidate quads from refined heads → Hungarian set matching loss ← Gold quads

Selection & Inference

Dev cF1 based configuration selection → Five-seed voting and top-k decoding → Final dimensional ASQP quads
